DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

To have a general inventive concept under PCT rule 13.1, the inventions need to be linked by a special technical feature. The special technical feature recited in claim 1 is a composition of an antibody that that inhibits the interaction between CD66a and CD66a ligands. In view of this Draberova et al (Folia Biologica 43:243-4, 1997) reads on the claim. Draberova et al teach an antibody that would inhibit the interaction of CD66a and CD66a ligand. Therefore the technical feature recited in claim 1 is not special. Accordingly the groups are not so linked as to form a single general concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I claim(s) claims 1 in part and claim 7, drawn to a composition for positive regulation of CD66a wherein the composition induces the expression of CD66a wherein the composition comprises DNA encoding CD66a, CD66a isoforms, CD66a fragments.

Group II claim(s) claims 1 in part and 2-4, and 6, drawn to an antibody, protein or peptides which inhibit the interaction between Cd66a and CD66a ligand.

Group III claim(s) 1 in part and claim 5, drawn to a composition for negative regulation wherein the substance inhibits the expression of CD66a or CD66a ligand and are anti-sense oligos or RNA.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: As set forth above, in view of the teaching of Draberova et al the groups are not so linked as to form a single general concept under PCT Rule 13.1 because the technical feature of claim 1 is not special.

Inventions of Groups I-III represent separate and distinct products which are made by materially different methods, and are used in materially different methods which have different modes of operation, different functions and different effects. The antibodies, proteins, and peptides of Group I, the DNA of Group II, and the anti-sense of Group III are all structurally and chemically different from each other. The DNA is made by nucleic acid synthesis while the antibody is raised by immunization and the protein is made by translation of the DNA. The examination of all groups would require different searches in the U.S. Patent shoes and the scientific literature and would require the consideration of different patentability issues. Thus the inventions I-III are patentably distinct.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different searches in the patent literature, restriction for examination purposes as indicated is proper.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1642

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
